

Figure 1. Scatter plot of the number of children in the household (X-axis) and the number of children in the household who are under 18 years of age (Y-axis). The data points are represented by small blue dots, showing a strong positive correlation. A solid black regression line is drawn through the data points, starting near the origin and extending towards the upper right corner. The density of the blue dots is highest in the lower-left region and decreases as the number of children increases.
